

AMENDMENTS TO THE ABSTRACT

Please substitute the following paragraph for the abstract now appearing in the currently filed specification:

ABSTRACT

A method for a transmission of additional information in a communication system. The method includes transmitting a set-up signal to negotiate a communication context between a first user station and a second user station, where each user station has an associated user, and where the set-up signal includes additional information. The method further includes receiving the set-up signal including the additional information at the second user station, displaying the additional information at the second user station, and processing at least one fee-based transaction associated with at least one of the communication context and the transmission of additional information.
